

## Indexes - 3 ☆

Points: 61 Rank: 17232

Problem

Submissions

Consider the following two designs to store the data using clustered indexes in MS SQL Server:

- In the first design, the fill factor is 20% and the total number of free rows per page are A.
  - In the second design, the fill factor is 40% and the total number of free rows per page are B.
- Which the followings describes the relation between A and B:

☐ A = 1.33B ✓☒ B = 1.33A ✗☐ A = 0.67B☐ B = 0.67A
